WILTEX 360°
WATER SCREEN FLAT FAN

WILTEX 360 FLAT spray nozzle has an external deflector, which discharges water in a flat circular shaped pattern of small droplet size. The water is uniformly distributed over the surface to be protected. The nozzle is used in water screening application. The minimum desirable pressure to achieve a reasonable spray pattern is 1.4 Kg./Sq.cm. The water distribution pattern as shown in the graph in following pages is at an average pressure of 5.0 Kg/Sq.cm. The change in pressure between 1.4 to 3.5 Kg./sq.cm does not affect much change in spray angle. The spray pattern should is in laboratory conditions. Outdoor performance is largely dependent on wind seep, its velocity and direction including field obstruction.

SPECIFICATION
Size : 1/2" or 3/4" NPT (M)
Spray : 360 Flat Fan
Mat'l : Brass or 316 SS
